PUSHBACK AND TOW TRAINING SIMULATOR

Intuitive, Intelligent and Diverse Training Solutions

“By employing simulators for training, vehicles are spared heavy use, require less maintenance and last longer overall.”

Safe ramp operations require skill and advanced training. Now you can provide both new and experienced operators with more cost-effective training using DPA's Pushback and Tow Training Simulators. New operators can gain the basic and advanced skills they'll need to be reliable, productive and safe on the job. Experienced operators can demonstrate and hone their abilities in periodic quality assurance testing. Unlike conventional training, our simulators let you repeat training scenarios as often as required from the safety of the simulator, saving you time and money.

- Touchscreen is the interface for additional tractor controls and push/tow procedures
- Customized databases to replicate airport or gate layout allow specific training in always-challenging locations
- Mobile training trailer options available for purchase or lease
- Three-channel immersive driving environment
- Windows™-based operating system

BETTER TRAINED RAMP CREWS HELP DRIVE DOWN COSTS

- Reduces companies' insurance costs by reducing their liability exposure. Simulator-trained drivers can sometimes qualify for personal insurance discounts, as high as 10 to 15%. (Ask your insurance agent.)
- Reduces capital investment for vehicles. By employing simulators for training, vehicles are spared heavy use, require less maintenance and last longer overall

FEATURES

- Conventional towbar and towbarless tractor options can be loaded onto one physical footprint, minimizing hardware cost and floor space
- Comprehensive aircraft library including major wide-, medium- and narrow-body aircraft

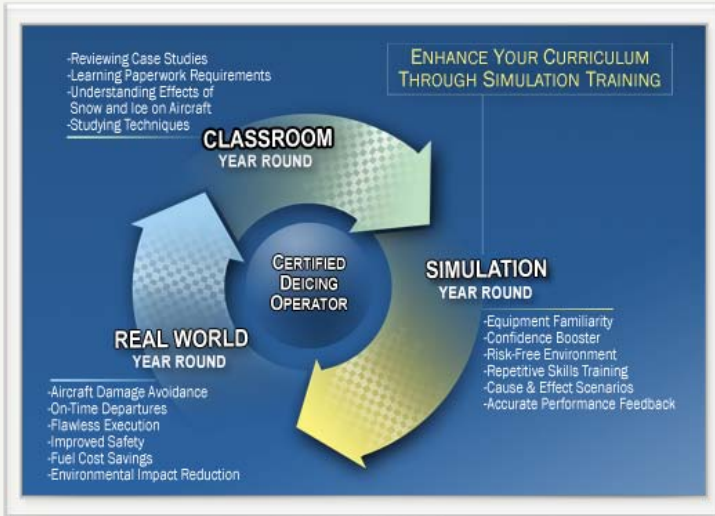

Our virtual touch screen panel puts all the scenario controls at your fingertips.

PUSHBACK AND TOW TRAINING SIMULATOR

Military, Government, and Commercial Clients

Recognize limits of conventional tractors to avoid shear pin failure and towbar collision

Efficiently train on a towbarless tractor to push or tow

New to the Ramp Portfolio is JBT AeroTech's Expediter towbarless tractor

- Replicates the complex task of pushing back an aircraft
- L-3's physics-based development approach lends a real-time response in connecting the towbar to the aircraft and pushing it out to the taxiway
- Hands-on experience ensures skill development and familiarity before you even step inside a real tractor
- Our immediate diagnostic printout helps trainer's spot bad habits

BUT DON'T TAKE OUR WORD FOR IT

We'll share with you what our customers tell us they have experienced:

- 75% of operators surveyed feel "Safer" or "Much Safer" after simulation training
- 40% reduction in the learning curve
- Training experts agree that training with simulation is four times faster so you can put more of your crew through training or increase their practice time
